3D CAVITATION

Best for overall fat reduction such as abdomen, thighs and "muffin top"..

Cavitation is a natural phenomenon based on low frequency ultrasound.. The ultrasound produces a strong wave of pressure to fat cell membranes. A fat cell cannot withstand this pressure and therefore disintegrates into a liquid state and transported through the lymphatic systems to the liver.

Results can be seen from treatment one, with an average loss of 2 - 4 cm per treatment. results will improve during each treatment.

3D CRYO FREEZE

Best for stubborn pockets of fat and body sculpting.

3D-Cryo Freeze is a unique, non-invasive treatment that specifically targets fat cells. By lowering the temperature of the fat cells to -6 degrees it pinpoints the content of the fat cells, causing them to crystallize. No other structures are affected by this process. The remaining content of the fat cells is then disposed of naturally through the lymphatic system.

The body takes several months to flush out the dead fat cells, so on average a 20% - 40% reduction of the fat in the localised area will be visible after 6 - 12 weeks.

3D-CRYO CHIN FREEZE

Designed to target the chin area, specifically the dreaded "double-chin".

3D-Cryo Freeze is a unique, non-invasive treatment that specifically targets fat cells. By lowering the temperature to -6 degrees it pinpoints the content of the fat cells, causing 20% - 40% of the fat cells in that area to die. No other structures are affected by this process. The remaining content of the fat cells is then disposed of naturally through the lymphatic system.

Best for pockets of stubborn fat, body sculpting and targeted fat removal.

The latest technology used to target specific focused areas of fat in the fastest possible treatment time. Ultrasound waves are delivered at precise depths that causes heating under the skin, effectively destroying the fat cells and tightening the skin in the treated area. The damaged cells are then flushed away via the lymphatic system.

Results can be seen from 2-4 months post treatment. The average reduction of the treatment area is typically 2-4 cm.

3D-RF FACE AND BODY TIGHTENING

Best for anti-ageing, skin tightening, smoothing of fine lines and wrinkles.

3D-Rv Face & Body penetrates the skin layers to selectively heat the skin tissue and the extra cellular matrix where the collagen fibres are embedded. This causes an immediate contraction of collagen fibres and simultaneously increases the metabolism of the fibroblast order to accelerate production of new collagen and elastin fibres to create a smoother, healthier and younger looking skin.

Results can be seen after the first treatment, however we generally recommend a course of treatments depending upon your requirements.

3D-EYE RF SKIN TIGHTENING

This treatment is fantastic for targeting crow's feet, and around the brown area as well as smoker's lines around the nose and upper lip areas, giving your skin a tighter, smoother, more youthful appearance.

3D-Rv Face & Body penetrates the skin layers to selectively heat the skin tissue and the extra cellular matrix where the collagen fibres are embedded. This causes an immediate contraction of collagen fibres and simultaneously increases the metabolism of the fibroblast order to accelerate production of new collagen and elastin fibres to create a smoother, healthier and younger looking skin.

3D-HIFU FACE

(NON-SURGICAL FACE LIFT)

This treatment is fantastic for overall skin tightening and rejuvenation as well as brow lifting, jowl line lifting, nasolabial fold reduction and periorbital wrinkle reduction.

During this non-invasive procedure, highly focused acoustic energy creates thermal coagulation zones at 3 different selected depths, following which, a wound-healing response results in the formation of new collagen thus providing a longer term tightening of the skin.

Generally a noticeable improvement in your facial contouring and fine lines and wrinkles will be visible within a 4 week period whilst further improvement in the facial skin tightening and wrinkles will be reportedly seen up to 6 weeks post treatment.

This treatment is fantastic for areas of the body with loose skin and cellulite, such as "bingo-wings", lower abdomen and back of thighs.

3D Body RF penetrates the skins layers to selectively heat the skin tissue and the extra cellular matrix where the collagen fibres are embedded. This causes an immediate contraction of the collagen fibres and simultaneously increases the metabolism of the fibroblastin order to accelerate production of new collagen and elastin fibres to create a smoother, healthier and younger looking skin.

Results can be seen after the first treatment, however we generally recommend a course of treatments depending upon your requirements.

3D-SHOCKWAVE

This treatment is fantastic for stubborn pockets of fat and cellulite.

3D Shockwave works by stimulating the fat breakdown area, collagen synthesis and lymphatic drainage. It is delivered by placing a probe up against the areas of cellulite, as it passes over the area it emits radial waves through the skin.

A course of treatment is typically 8 - 10 individual 30 minute sessions. Results are seen as quickly as 2 weeks after starting the course. If you exercise and increase your water intake you may see even better results.

We are continually developing and adding to our range of treatments for women and men, so if you cannot see something here that you are looking for, please get in touch.
